PROFESSIONAL SUMMARY

Results-driven PHP Developer with 3 years of experience designing, developing, and deploying secure, scalable web applications for government and enterprise clients. Proficient in Core PHP, Laravel, CakePHP, MySQL, and PostgreSQL. Proven track record delivering payment gateway integration, RESTful API development, role-based access control (RBAC), digital signature authentication, workflow automation, and full-stack admin dashboard development. Committed to clean code, data security, and on-time delivery in Agile environments.

TECHNICAL SKILLS

Languages: PHP, JavaScript, HTML5, CSS3, Bootstrap, AJAX

Frameworks: Laravel, CakePHP, Core PHP, Twig

Databases: MySQL, PostgreSQL, SQL, Oracle DB

API & Integration: RESTful API Design, Third-party API Integration, Payment Gateway Integration, Postman

Security & Auth: Digital Signature Certificate (DSC), Role-Based Access Control (RBAC), Data Encryption

Version Control: Git, GitHub, SVN

Tools & IDEs: Visual Studio Code, Notepad++, Android Studio

Soft Skills: Agile/Scrum, Cross-functional Collaboration, Problem Solving, Code Review

WORK EXPERIENCE

Silver Touch Technologies Pvt. Ltd. — Ahmedabad, Gujarat

July 2023 – Present

PHP Developer | Core PHP | Laravel | CakePHP

- Developed and maintained 5+ production-grade web applications using PHP, Laravel, and CakePHP, serving government and enterprise clients with high availability requirements.
- Integrated secure payment gateways into government portals, enabling real-time online transactions with PCI-compliant data handling and audit trail generation.
- Designed and implemented RESTful APIs to support third-party service integrations, reducing manual data exchange processes and improving system interoperability.
- Engineered complex MySQL query optimizations and schema designs, significantly improving data retrieval performance across high-volume transactional databases.
- Implemented role-based access control (RBAC) with hierarchical multi-level permissions, strengthening application security for multi-department enterprise systems.
- Collaborated with front-end developers to build responsive, cross-browser-compatible UIs using HTML5, CSS3, and JavaScript within an MVC architecture.
- Managed source code using Git/GitHub and SVN, conducting code reviews and maintaining version history in an Agile team environment.

KEY PROJECTS

Animal Welfare Board of India (AWBI) — Government Web Portal | awbi.gov.in

- Developed a national government web platform digitizing animal welfare operations across all Indian states using PHP, CakePHP, and MySQL.
- Built scalable backend modules capable of handling high data volumes with efficient query design, supporting multi-department data workflows.
- Integrated secure payment gateway for online transactions; implemented audit trails and compliance reporting features for regulatory standards.

IIMC Student Dashboard — Government Educational Portal | iimc.gov.in

- Built a comprehensive student management system for the Indian Institute of Mass Communication (IIMC), a Government of India body, using Core PHP, Twig, and MySQL.
- Developed course enrollment, attendance tracking, fee payment, and automated notification modules serving hundreds of students.
- Created faculty admin panel for managing student academic records, grade management, and progress report generation.

Pratishtha — Event Management Platform | kanjishwami.org

- Architected event management modules using Core PHP, Twig, and MySQL for large-scale Satsang bookings, T-shirt allocations, and mass participant registrations.
- Built concurrent booking management backend with resource allocation logic, automated report generation, and integrated payment gateway.

MS Branch Project — Secure Army Intra-Communication System (Internal)

- Engineered a classified, secure internal communication and document workflow system for the Indian Army using Laravel and Oracle DB.
- Integrated Digital Signature Certificate (DSC) for secure document approvals, sign-off workflows, and audit trail maintenance.
- Implemented hierarchical RBAC with granular multi-level permissions supporting strict military departmental access requirements.
- Developed real-time tracking dashboards and form-based workflow modules adhering to stringent government security standards.

IFP Portal — Enterprise Workflow Management System

- Developed a modular CakePHP enterprise application with PostgreSQL for dynamic form management, document workflow routing, and multi-level approval systems.
- Built reusable dynamic letter templates, approval mechanisms, and automated validation workflows supporting complex multi-step business processes.
- Enforced role-based access control ensuring strict data segregation, audit compliance, and access logging across departments.

EDUCATION

B.Tech — Computer Science & Engineering

2019 – 2023

Shivajirao Kadam Institute of Technology & Management, Indore | CGPA: **8.68 / 10.0**

ADDITIONAL INFORMATION

- Target Roles: PHP Developer, Laravel Developer, Backend Web Developer, Full Stack Developer (PHP)
- Strong grasp of OOP, MVC architecture, SOLID principles, and design patterns applied in production codebases
- Experience delivering both greenfield builds and maintenance of legacy PHP codebases
- Languages: English (Professional Working Proficiency), Hindi (Native)
